[LinkedIn: Heydari-m](#)

Senior Software Engineer with 7+ years of experience building SaaS applications, backend systems, and third-party integrations. Strong background in PHP, Laravel, REST APIs, SQL, and production systems, with a focus on reliability, performance, and maintainability. Experienced owning features from technical design through production and using AI coding agents throughout development for research, implementation, debugging, testing, and code review while keeping architecture and final technical decisions under my responsibility.

Skills: PHP • Laravel • REST APIs • AI-Assisted Development • MySQL • PostgreSQL • Redis • Docker • AWS • CI/CD • Git • Linux • SQL Optimization • Third-Party Integrations • JavaScript • Vue.js

EXPERIENCE

Team Procure *Senior Software Engineer Sep 2021 – Apr 2026*

A SaaS platform for managing procurement workflows, tenders, and purchasing operations.

- Designed and maintained REST APIs, webhook integrations, and financial integrations with Stripe, QuickBooks, and Sage using OAuth and event-driven workflows.
- Owned production backend systems, investigated production issues, refactored legacy code, and achieved up to 2× faster search and reporting through SQL optimization, query redesign, indexing, and AI-assisted bottleneck analysis.
- Led a live customer-facing project, turning a bug-heavy system into a stable and usable platform.
- Maintained and enhanced a Node.js socket-based microservice powering real-time system communication.
- Developed asynchronous workflows using queues, scheduled jobs, and event-driven processing to improve reliability of high-volume production systems.

Mahak Learning Group *Full Stack Developer Oct 2019 - Aug 2020*

- Maintained, analyzed, and refactored legacy PHP codebase while implementing new features and improving maintainability.
- Extended third-party media player behavior to support RTL languages, improving user experience for Farsi educational content.
- Replacing Flash-based video playback with browser-compatible iSpring support.

KIMIA TEB *Software Developer Apr 2019 - Oct 2019*

- Containerized and deployed the clinic management system to customers' on-premises servers using Docker and Nginx, ensuring consistent installations across healthcare clients.
- Integrated third-party healthcare insurance APIs and automated secure data exchange with external systems.

Galactic Travel *Backend Developer May 2017 - Dec 2018*

- Designed and implemented REST APIs integrating multiple transportation providers, supporting high-volume booking transactions and real-time availability.
- Implemented a Node.js-based notification system to route real-time customer requests to hotel staff.

EDUCATION

Seraj University

Master of Software Engineering
2015 – 2018

UCNA

Bachelor of Software Engineering
2012 - 2015
